Control room

For 24/7 work

CONTROL ROOM TABLES

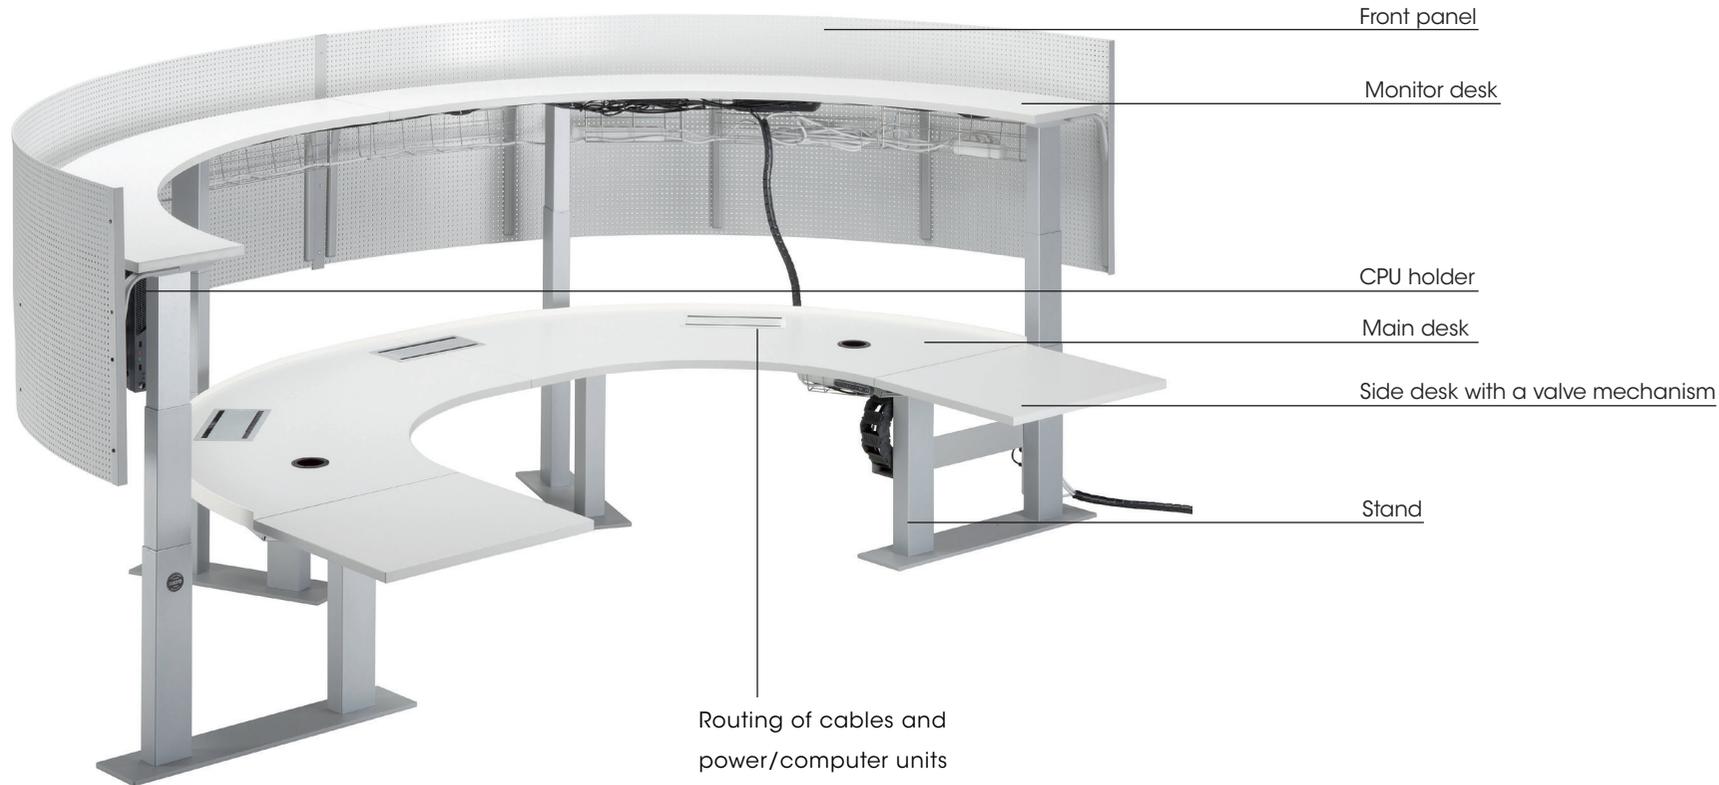

Technical control room is a tailored 24/7 workstation concept that can easily be adjusted to the customers' needs.

It is a holistic concept that suits various workstations and spaces. The concept focuses on a 24 hour environment of comfort, ergonomics, safety and efficiency.

The concept can easily be customized and adjusted to the customers' needs, both its format and its features. The outset is a 3D-design service that creates detailed pictures in the first phase of the planning and in time for the final assembling.

Our intension is to build the best solution for our customers. We also offer KABs outstanding control room chairs.

All control room tables are designed for an easy maintenance of equipments. The table shown below is in a maintenance position.

FRAMEWORK

The framework is stable and the desk parts can be adjusted separately. This guarantees for the best ergonomic work posture, providing the option to alternate between sitting and standing.

The frame of the table is a flexible module concept, meaning that the table can be adjusted after the customer's access to space and after their specific requirements. The continuous adjustment of the monitor desk allows for various use of monitoring, both vertically and horizontally. The table can be adjusted to an optimal viewing height. The cables can be routed discreetly where they are needed. Furthermore, the table can be equipped with various additional accessories.

The table is designed for an easy maintenance. The CPU and cables can easily be changed, without the need of disassembling the table. This allows for the shortest possible break in proceedings.

Different electrical adjustment for the main - and monitor desk. The adjustment range is 65 cm (57-122 cm).

The CPU-stand is designed for easy maintenance and for the CPU to be easily replaced.

The cables are collected together and placed neatly. They are routed along with the body of the table.

The control table can be equipped with a panel after requirements. The picture shows a control panel with three memory functions and height display. Different equipments can easily be added after requirements. The picture displays a pen holder, embedded in the table top.

Power sockets can be equipped after the customers requirements. Customized accessories can easily be added.

ACCESSORIES

Isku control room workstation concept is always designed in close co-operation with the user and our designers. In order to fulfill specific requirements, Isku has a test workstation in use, where ideas can cultivate together with the designers. Since 1928

www.isku.com

Isku is a Finnish family business founded in 1928 in Lahti. Isku designs, manufactures and markets furniture and holistic interior design solutions for homes, schools, offices, health care and all public spaces. In addition to a chain of stores covering all of Finland, Isku operates in the Nordic countries, the Baltic countries, Poland, Russia and the Middle East. Isku's own furniture factories are located in Lahti. Isku complies with the ISO 9001 quality system, and actively develops ecological production: Isku was the first in the industry to be awarded the ISO 14001 environmental certificate, and today, its entire production is PEFC certified, meaning that the origins of all wood used by Isku is known and that the wood has been produced according to the principles of sustainable development.
